CATTLEMAX
POUR-ON FOR BEEF AND DAIRY CATTLE

For the treatment and control of Ivermectin sensitive:

Gastrointestinal nematodes:
- Adult and immature (L2): Small Brown Stomach Worm (including inhibited stages) (Ostertagia ostertagi), Barber’s Pole Worm (Haemonchus placei), Stomach Hair Worm (Trichostrongylus axei), Intestinal Hair Worm (T. colubriformis), Small Intestinal Worm (Coopinia spp.), Nodule Worm (Desoogaphostomum radiatum); and
- Adult stages of Cooperia oncophora, C. punctata, Desoogaphostomum venulosum, Whip Worm (Trichuris spp.), Intestinal Threadworm (Strongyloides papillosus); and
- Immature stages (L1) of Thin Necked Intestinal Worm (Nematodirus spp.).

Lungworms (adult and immature) Dicycaulus viviparus.

Eyeworm Thelazia spp. (adult stages).

Sucking and Biting Lice: Linognathus vituli, Haematopinus eurysternus, Bovicola boswi, Solenopotes capillator.

Mites: Chorioptes bovis, Sarcoptes scabei var. bovis.

Buffalo Flies Haematobia irritans irritans

Cattle Ticks: (Boophilus microplus) including organophosphate, synthetic pyrethroid- and amidine-resistant strains. Maximum tick efficacy is achieved 4-5 days after treatment. Engorged female ticks that drop from cattle in the initial days after treatment may lay viable eggs. This should be taken into account when planning a strategic tick control program. CATTLEMAX should be alternated with conventional dips or pour-ons when the programme requires repeated treatments.

PERSISTENT ACTIVITY:
CATTLEMAX applied at the recommended dose of 1mL per 10kg of liveweight controls infections of Stomach Hair Worm (Trichostrongylus axei) and Small Intestinal Worm (Coopinia spp.) for up to 14 days after treatment; Small Brown Stomach Worm (Ostertagia spp.) and Nodule Worm (Desoogaphostomum radiatum) for up to 21 days after treatment; Lungworm (Dicycaulus viviparus) for up to 28 days after treatment; Buffalo Fly (Haematobia irritans irritans) for up to 21 days after treatment.

For best results CATTLEMAX should be part of a total parasite control programme including internal and external parasites. Consult your veterinarian for a complete parasite control programme.

DIRECTIONS FOR USE:

Restrains
DO NOT USE in pregnant cows less than 7 days before calving.

DOSAGE:
This product is formulated only for external application to cattle; do not use in other species. The formulation should be applied along the topline in a narrow strip extending from the withers to the tailhead. The dose is 1mL for each 10kg of liveweight.

Dose the mob according to the heaviest animal by liveweight in each group (cows, bulls, calves, heifers etc.). When there is a large variation in size within the group, draft into two or more lines based on bodyweight, to avoid overdosing. Do not underdose. Cattle should be weighed with either scales or with a weighband.

Heavier animals (for example, mature bulls) should receive an additional 5mL for each 50 kg over 650 kg.

Treatment should not be repeated in less than 42 days.

NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION

WITHHOLDING PERIODS:
MEAT: DO NOT USE less than 28 days before slaughter for human consumption.
MILK: NIL.
Bobby calves: DO NOT SLAUGHTER for 4 days bobby calves born to cows treated during pregnancy.
EXPORT SLAUGHTER INTERVAL (ESI): DO NOT SLAUGHTER for export for 28 days after treatment.

SAFETY TO CATTLE:
Field studies have demonstrated a wide safety margin. The topically applied formulation is expected to be well tolerated by breeding animals.

GENERAL INSTRUCTIONS:

Administration
Efficacy of CATTLEMAX is not adversely affected if the hide is wet or if rainfall occurs shortly after treatment. However, it is not considered good agricultural practice to treat animals if they are wet or rain is likely.

PRECAUTIONS:
Use only in well-ventilated areas or outdoors. Close container when not in use.
Cloudiness may result when CATTLEMAX is stored at temperatures below 0°C. Allowing to warm at room temperature will restore the normal appearance without affecting efficacy. The antiparasitic activity of ivermectin will be impaired if the formulation is applied to areas of skin with mange scabs or lesions, or with dermatoses or adherent materials, e.g. caked mud or manure.
This product is for application to the skin surface only, do not give orally or parenterally.

CATTLEMAX is not recommended for use in species other than cattle.

NOTE TO USER:
The colour of CATTLEMAX may fade when exposed to light. This loss of colour does not reflect loss of potency of ivermectin. However, prolonged exposure (ie. weeks) to light can result in a gradual decline of ivermectin potency in the formulation.

DANGER
GIVES OFF HIGHLY FLAMMABLE VAPOUR. KEEP AWAY FROM HEAT, SPARKS, OPEN FLAME OR OTHER SOURCES OF IgnITION. KEEP CLOSED WHEN NOT IN USE.

PROTECTION OF WILD LIFE, FISH, CRUSTACEANS AND THE ENVIRONMENT
Ivermectin is extremely toxic to aquatic species. Do not contaminate dams, rivers, streams or other waterways with the chemical or used container.

When used according to label directions CATTLEMAX is not likely to have an unintended effect that is harmful to the environment or have an overall adverse effect on dung beetle or earthworm populations. Increased mortality and impaired development of dung beetle larvae may be expected, but for a limited period after treatment. There may also be short-term indirect effect on the rate of earthworm colonisation of dung pats.

SAFETY DIRECTIONS: Poisonous if swallowed. May irritate the eyes. Avoid contact with eyes. Wash hands after use.

FIRST AID: If poisoning occurs contact a doctor or Poisons Information Centre.
Phone Australia 131126.
For further information, refer to the Material Information Data Sheet.

DISPOSAL:
This container can be recycled if it is clean, dry, free of visible residues and has the drumMUSTER logo visible. Triple or pressure rinse container for disposal. Disposal of rinseate or any undiluted chemical according to State legislative requirements. Wash outside of the container and the cap. Store cleaned container in a sheltered place with cap removed. It will then be acceptable for recycling at any drumMUSTER collection or similar container management program site. The cap should not be replaced but may be taken separately.

STORAGE:
Store below 30°C (Room Temperature). Store bottle to protect from light.
